DETAILED ACTION

1. This Office action is in response to papers filed on 17 October 2008.
2. Claims 17, 19-21, 23, 25, 31, 33-35, 37, 39, 41, and 42 are pending and presented by examination. Claims 18, 22, 24, 26-30, 32, 36, 38, and 40 have been canceled and claims 41-42 are added.

Response to Amendment

3. The objection made to the specification is withdrawn in light of the amendments made.
4. The rejection of claims 13-40 under 35 USC §112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter is withdrawn in light of the amendments made and/or cancelling of the claims.
5. The rejection of claims 13-40 under 35 USC §103(a) as being unpatentable over US Patent No. US 6,847,857 B2 to Sugie is withdrawn in light of the amendments made.

Allowable Subject Matter

6. Claims 17, 19-21, 23, 25, 31, 33-35, 37, 39, 41, and 42 are allowed. The claims have been renumbered 1-14.

REASONS FOR ALLOWANCE

7. The following is an examiner's statement of reasons for allowance:

The reference of prior art to Sugie (US Patent No. US 6,847,857) teaches of a threading machine operation while varying the rotational frequency of a spindle, the reference, taken alone or in combination with other applicable prior arts, fails to teach a threading control system/method for performing a threading operation on a workpiece by moving, in synchronization with rotation of a main spindle on which the workpiece is mounted, either a cutter or the workpiece in a feeding spindle direction which is a central axis direction of the workpiece rotated by the main spindle, specifically including:

(claim 27) "calculating, when the workpiece is threaded either at a second feed rate different from a previous first feed rate, or on a second machine different from a previously used first machine, a main-spindle threading-start timing shift based on the first servo feed rate, the second servo feed rate, and a servo-spindle acceleration time-constant of the feeding spindle"

(claim 37) "a main-spindle angle computing section which calculates, when the workpiece is threaded either at a second feed rate different from a previous first feed rate, or on a second machine different from a previously used first machine, a main-spindle threading-start timing shift based on the first servo feed rate, the second servo feed rate, and a servo-spindle acceleration time-

constant of the feeding spindle, an which alters a threading-start timing to thread the workpiece based on the calculated main-spindle threading-start timing shift"; in combination with the remaining elements and features of the claimed invention. It is for these reasons that the Applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
